smaller geopolitical units of analysis. Coarseness and detail do, however, have their costs. Fifty-one volumes, one for each of the States and District of Columbia, are required in order to have data.

Completion of this project has required cooperation between the AMA and the Bureau of the Office of the Assistant Secretary for Health, Education and Welfare (DHEW). The *AMA Physician Characteristics* is the data source and considerable resources have been utilized by the AMA in developing the computer programs and designing the volumes. Contract 8-0163 with the Health Resources Administration of DHEW has provided the financial support to print and disseminate these volumes. In addition, the bound volumes, print tapes of the information contained in this report are available from the Health Manpower. Howard V. Stambler, Chief of the Division of Manpower Analysis of the Health Manpower is the Contract Project Officer. The data or conclusions contained in this study should be interpreted as representing the official policy of the Department of Health, Education and Welfare.

*Characteristics of Physicians* was conceived by AMA initially in response to passage of the National Health Planning and Resources Development Act of 1968 (Public Law 90-361). With passage of this legislation it became apparent that planning and regulation were to become major components of the health care system in the States.

Redistribution of physicians also has been the object of major legislative action for several decades. Four separate pieces of legislation each attempt to effect a different distribution of health resources have been enacted by the federal government. The most recent of these is the Health Pro-

The *Characteristics of Physicians* series is designed to meet some of the data requirements inherent in the market approaches to resource distribution. Assessment of specialty and geographic distributions, determination of physician supply and planning to ensure that health care needs are met require detailed data on relevant characteristics of the physician population. Data in the COP Study are available with the expressed hope that they will be coupled with intelligent analysis and careful implementation.

Use of these data, however, will not be limited to policy makers. In addition, individual physicians may utilize *Characteristics of Physicians* for making specialty and migration decisions, and medical schools may consult *Characteristics of Physicians* to determine types of continuing medical education programs that will be of interest to a large proportion of physicians in the region. Researchers in health care and health sciences have also repeatedly expressed a need for this type of data provided. Therefore, *Characteristics of Physicians* is being widely distributed in order to meet the repeatedly expressed needs of these groups.

The efficacy of the market as an allocative and distributive mechanism for health care resources is gaining supporters. It will be some time before the desired incentives can be reintroduced into the health care market. Until that time, the CHSRD is attempting to ensure that decisions relating to health personnel are based on the best available and, thus, introduce as few distortions as possible.

Director, Center for Health  
Services Research and

project possible and in assuring the resources necessary to its successful completion. The authors wish to thank the Roback of the AMA Survey Data Center for his advice and comments during conception and throughout the term of this project. The authors also wish to thank Peter and Raymond Healy, from the AMA Computer and Information Services, for their programming expertise needed to complete

Finally, the authors also wish to thank Stambler, Director, Division of Manpower, Bureau of Health Manpower, Department of Education, and Welfare, and Project Office for their efforts to make publication and distribution of the volumes possible. Special appreciation goes to Kramer, Contract Liaison, for her work in publication and dissemination activities for

... summary national data for comparison. Thus, the series provides the only basis on physicians across all areas and significant use to practitioners and health care industry.

... here are for the physician population in the United States. Detailed characteristics for all physicians with known addresses, counts of physicians who are inactive, and counts of physicians who are inactive are provided on each table.

1975 was selected as the point in time of the following reasons;

... was signed in January, 1975, and it was during 1976 that significant activity was in response to this legislation. Thus, 1975 represents the last year in which the health care industry was not affected by this major piece of legislation and, therefore, is the most appropriate year for future analyses of the impact of this legislation.

... represents the first statistical series for which an exceptional amount of time had been expended in the conceptualization of the data set, and writing of the computer programs. However, the series has been developed for publication of the data on a more regular and current basis in the future.

... material which follows provides a summary of the geographic aggregation of the physician characteristics tabulated. The relationship to other AMA publications and data sources is detailed. In addition, the *Medical Association Physician Masterfile* is described, and the health service areas covered in the Masterfile; and a sample of the questionnaire used for the purpose of updating the Masterfile is included. Twenty-one pages of the Table of Contents—six national tables repeated in all 51 volumes, and 15 tables providing: state, HSA, county, and city data—follow immediately. An additional table providing medical school data is included, and a table of medical schools.

... tion, many tables report Federal and Non-Federal physicians separately. In some geographic regions, the inclusion of Federal physicians in the tables would provide an upward bias to the real supply of physicians available to the general population.

## Geographical Units of Aggregation

Each volume of COP represents data for the United States as a whole; for the particular state; and for the county, health service areas, and counties within the state. Each physician is allocated to a particular geographic location on the basis of his/her professional mailing address as recorded in the *AMA Physician Masterfile*.

The geographical subdivisions within the state are given additional explanations. These follow immediately below.

### County Group

The county group tables (Tables 13-15) are based on the Demographic County Classification based on the Marketing Management, Inc.'s population and Standard Metropolitan Statistical Areas (SMSA) definitions. The SMSA's serving as the basis for the county group size groups 6 through 9 are based on the metropolitan area concept established by the United States Bureau of the Budget.<sup>1</sup> An SMSA consists of the following: 1) central city of 50,000 or more inhabitants; 2) the remainder of the county in which the central city is located; and 3) contiguous counties that are integrated economically and socially with the county containing the central city. The group 5 county classification includes "Potential SMSA's" as defined by the Marketing Management, Inc. and are considered as candidates for SMSA status. The county classification groups 1 through 4 include counties in nonmetropolitan areas. Table A below summarizes the 9 demographic county classifications.

The independent cities of St. Louis, Missouri; Baltimore, Maryland; Alexandria, Virginia; Hampton, Virginia; and Chesapeake, Virginia are treated as individual counties and assigned to the appropriate county group on the basis of the city's population. A

<sup>1</sup>Sales & Marketing Management, Inc. and the Bureau of Economic Analysis use identical SMSA definitions except for a few instances in England where the former uses the county unit rather than township as the geographic boundary. SMSA's are defined

	500,000 to 999,999 inhabitants	37	128
6	Counties in SMSA's with 50,000 to 499,999 inhabitants	184	330
5	Counties considered potential SMSA's	41	51
4	Non-Metropolitan counties with over 50,000 inhabitants		229
3	Non-Metropolitan counties with 25,000 to 49,999 inhabitants		484
2	Non-Metropolitan counties with 10,000 to 24,999 inhabitants		907
1	Non-Metropolitan counties with under 9,999 inhabitants		769

defined as independent are included in "number of counties" column.

is J. Goodman, *Physician Distribution and Medical Licensure in the U.S., 1976*  
Chicago: American Medical Association, 1977), p. 32.

cities, largely those in Virginia, are incorporated into the county which encompasses it. For instance, Anne County in Virginia is referred to as Beach city. In addition, Kalawao County in Hawaii is combined with Maui County and Alaska is divided into four judicial divisions with assignment into county group based on the population of each division.

consist of an aggregation of counties. In some cases, however, (Alaska; Connecticut; Massachusetts; Illinois; of Chicago; and the Navajo, Hopi, White Mountain, San Carlos, and Papago Indian Reservations) the service areas were not composites of counties but of politico-legal boundaries. The exact politico-legal boundaries for each HSA are listed in Exhibit A.

## Service Area

National Health Planning and Resources Development Act of 1974 mandated the division of the country into health service areas. One section of this act, Tables 16-18, presents data on Non-Federal health service areas located entirely or partially within the state covered in this volume. States with one health service area within their boundaries are listed in Tables for each health service area. In states with more than one health service area, the entire state is designated a health service area, and, of course, only one health service area table. The *Masterfile* data were converted into the health service area classifications based upon the listing of health service areas published in the September 2, 1976, *Statistical Register* and incorporate revisions by the Department of Health, Education, and Welfare through July 1, 1976. In most states, HSA's

## County

Selected characteristics of physicians by county for each specific state are listed in Tables 19-21. If a physician is located in a county, that county is not listed in the tables. For some states, noncounty geographic areas are treated as counties where the geographic boundaries used differ. This usage parallels the usage in the group tables. The independent cities of St. Louis, Missouri; Baltimore, Maryland; Alexandria, Virginia; Hampton, Virginia; and Chesapeake, Virginia are treated as individual counties. All other cities, largely those in Virginia, are incorporated into the county which encompasses it. Princes Anne County in Virginia is referred to as Virginia Beach. Kalawao County in Hawaii is combined with Maui County. The four judicial divisions of Alaska are treated as counties.

## SURGICAL SPECIALTIES

Child Psychiatry		
Diagnostic Radiology	GPM	General Preventive Me
Forensic Pathology	PH	Public Health
Neurology	R	Radiology
Occupational Medicine	TR	Therapeutic Radiology
Psychiatry		
	OS	Other Specialty
	US	Unspecified

## Characteristics

Descriptions of physicians are described in this section in terms of a number of professional characteristics. Some individual characteristics cross-over with others. Key characteristics include: Major professional activity, age, sex, board certification, Federal or Non-Federal employment, and type of graduation. The thirty-six specialties included in this publication are the same as those in other AMA publications such as the *Physician and Medical Licensure in the U.S.*, which are presented in Table B. A physician's classification is defined as that in which he/she is spending the largest number of practice hours. The county tables utilize the classification of primary care/non-primary care specialists. For the purposes of these tables, physicians whose specialty is general practice, internal medicine, pediatrics, and obstetrics and gynecology. Another area of general interest is board certification. Certification indicates that a physician has satisfactorily completed an examination in an area of specialization and has taken all

of the specific training requirements for certification by a specialty board.<sup>2</sup> The licensed physician is required to practice any specialty regardless of whether he/she is board certified or not. Tables in this section indicate board certification in some specialties, but not necessarily the specialty in which the physician is classified. However, over 90 percent of those reported as board certified are certified in the specialty in which he/she is classified.<sup>3</sup>

Physicians' professional activity by specialty is used to assess the availability of patient care. The physician's professional activity is reported by patient care subgroups of patient care on the basis of

<sup>2</sup> "The boards are in no sense educational institutions. A certificate of a board is not to be considered a degree. It is not on any person's legal qualifications, privileges, nor is it a license to practice medicine or a specialty. The boards do not in any way limit or restrict the professional activities of a licensee, nor do they desire to interfere in the regular or legitimate practice of a practitioner of medicine." Liaison Committee on Certification, *Directory of Accredited Residencies*, 1978 (American Medical Association, 1978), p. 367.

<sup>3</sup> *AMA Physician Masterfile, 1976. Special Tabulation of Survey and Data Resources*, American Medical Association.

...categorized as not classified are those for which the AMA has not received any information as to current practice and present employment.

Two of the two other classifications used in these physician characteristics are: Age as defined in 5-year intervals of under 35, 35 to 44, 45 to 54, 55 to 64, 65 to 74, and 75 and over; Federal employment as defined by the Veterans Administration, the U.S. Public Health Service, and the National Health Service.

The geographical background of physicians is presented in several forms. Physicians who graduated from U.S. medical schools are categorized by state of graduation and the state in which they currently practice medicine. In addition, physicians are categorized by particular county group or county within a state. Physicians are also cross-categorized either as having graduated from a medical school in the state, in a contiguous state, in another state, in Canada, or outside the United States.

## RELATIONSHIP TO OTHER AMERICAN MEDICAL ASSOCIATION PUBLICATIONS AND TO THE COOPERATIVE HEALTH STATISTICS SYSTEM (CHSS)

In previous AMA publications, *Physician Workforce*, *Physician and Medical Licensure in the U.S.*, and *Medical School Alumni*, have reported similar information. This publication provides more detail than previously available in published AMA publications.

This publication has two key features: greater detail of physician characteristics and greater detail with respect to geographic units. More detail is provided for physicians by sex, and specialty board certification, county groups, individual counties, and health service areas. Thus, this publication provides a more extensive set of data needs not previously met by any AMA publication series.

This publication is a collection effort to provide information on physician characteristics. The data published in *Characteristics of Physicians* are the result of an undertaking by the Cooperative Health Statistics System (CHSS). Although this system eventually will collect data on a state-by-state basis for health-related occupations, reports published as a

## INTERPRETATION OF TABLES

Because of the complexity and detail presented in these volumes, care must be taken in their interpretation. A few explanatory comments are necessary about the treatment of the various classifications used in these tabulations.

As mentioned previously, it was felt that data on seasonally active physicians would be most useful for research and planning purposes. At the same time, however, it was felt that the total pool of physicians and manpower should be represented in these volumes. This dual purpose caused some problem in the construction of certain tables because of the inactive and not classified categories. These two categories are included in the tabulations but are treated differently depending on the type of cross-tabulation involved. In tables in which specialty is cross-tabulated with professional activity, the inactive and not classified physicians are included in the total value for each specialty distributed by specialty. Instead, these two categories are provided at the bottom of the specialty column as "Inactive," "Non-classified," and "Unknown." To arrive at the total value, the inactive and not classified values should be added to the other major professional activity categories. This applies to Tables 1, 3, 6, 9, 16, and 19.

### Address Unknown

Physicians with unknown addresses are included in Table 1 for informational purposes. Again, this information is not distributed throughout the table but is included in the grand total. Physicians with unknown addresses are excluded from all other national tables; therefore, the grand total value on Table 1 exceeds the total on Table 2 plus the total in Table 3, and the total on Table 4.

### Availability of Data

This concludes the description of data available in the COP series. Every effort has been made to make the most frequently requested information available in a meaningful way to most users. These data are available in the form of print tapes from the Bureau of Health Manpower. In addition, the Bureau is currently underway to publish the COP series on a microfilm format.

\* These observations are based on a comparison of the 1970 Annual for Massachusetts and the *Characteristics of Physicians*.

a record-keeping device for membership purposes. Decisions were made on a day-to-day basis without a unified approach and without any way of knowing what these decisions would mean in terms of methods and interpretation of the data.

As activities within the Association became more complicated, the complexity of data requirements for the *Masterfile* was, therefore, expanded and changed to meet these requirements. Today, the *AMA Masterfile* is the most comprehensive and authoritative source of physician data in the United States. It contains information on every physician in the country, including members and non-members of the Association, on graduates of American medical schools who are practicing in the United States, and graduates of foreign medical schools who are in the United States and meet the requirements for primary recognition as physicians. Thus, all physicians comprising the total manpower pool are included on the *AMA Masterfile*.<sup>6</sup>

Information is entered on each individual upon entry into the pool or, in the case of foreign and Canadian physicians, upon entry into the U.S. As a physician's career develops, additional information is added to the file—e.g., internship and residency training, board certification, professional affiliations, and other characteristics. Although such characteristics change over time, they are not subject to change. These types of characteristics are in the "historical" portion of the *Masterfile*. In contrast, there is the "current professional activities" portion of each physician's record that identifies his present professional activity, specialties, and status. By definition, this current portion of the *Masterfile* is subject to constant change and must be maintained through intense monitoring techniques.

In 1966, physician classification by specialty, hospital and employment was made through the use of the Professional Activities (CPA) system, which was based upon a "private practice/not in private practice" concept. Data were collected under this system via a short postcard-type questionnaire en-

quiries relating to the number of patient hours worked in each activity and the manpower cannot be properly allocated to different activities.

This recommendation gained extensive support in 1966 when the then AMA Department of Research, which has been replaced by the Department of Statistical Analysis and is now a part of the National Center for Health Services Research and Development, began its efforts to update, improve, and reorganize the *AMA Physician Masterfile*. In its evaluation of the *Masterfile* base, it identified four major limitations in the classification system:

1. Existence of categories which were mutually exclusive, resulting in confusion and overlap between and within activity, specialty, and employer categories.
2. Lack of a criterion upon which to base classification.
3. Lack of information on the most recent activity for each individual record.
4. Unavailability of information on recent activity for the annual verification questionnaire.

These deficiencies were of sufficient concern to prompt major revisions in both the structure of the *Masterfile* and data collection procedures. Therefore, a project (the Reclassification of Physicians Project) was initiated to redesign the classification system. The National Center for Health Services Research and Development, with the National Center for Health Statistics, the United States Public Health Service, the Bureau of Demographic Surveys of the U.S. Bureau of Census, and knowledgeable researchers in academia, participated in the project.

The first step in reclassification was the redesign of the format of the 1966 edition of the *AMA Physician Masterfile*, *Physicians, Hospitals, and Hospital Beds*, which was published by the AMA Center for Health Services Research and Development. Through a series of computerized changes, the old *Masterfile* category "private practice" was converted to the new "patient care/other professional activity" category. The 1966 format changes constituted a step in the right direction, an important deficiency in the *Masterfile* of the physician population remained: the data were not being collected under the old classification system. It became obvious that the data collection procedure had to be revised to correlate with the new

<sup>6</sup>Draws heavily from: Goodman, L.J. *Physician Distribution and Medical Licensure in the U.S., 1976*. Chicago: American Medical Association, 1977.

## EXHIBIT A:

### HEALTH SERVICE AREA DESIGN JULY 1, 1976

The National Health Planning and Development Act of 1974 (PL #93-641) r health service areas be established th United States. The legislation specified th service area meet the following requireme

1. The area must be a rational geogr containing a comprehensive range vices, and of a character suitable fo planning and development of health

<sup>7</sup>Committee on Interstate and Foreign Commerce, Policy, Health Planning and Resources Development Report No. 93-1382. (Washington: Government

lines, with the approval of the Secretary, the area meets the other requirements of this section. "Unusual" and "highly unusual" circumstances are to be defined by the Secretary in regulations.

To the maximum extent feasible, the boundaries of a health service area must be coordinated with the boundaries of Professional Standards Review Organizations, existing regional planning areas, State planning and administrative areas.

A standard metropolitan statistical area (SMSA) must be entirely contained within the boundaries of one health service area unless the Governor of each State in which a SMSA is located determines, with the approval of the Secretary, that a health service area should contain part of the SMSA in order to meet the other requirements of this subsection.

Health Service Areas designated in July 1976 \* and the definitions used in this publication. A listing of the counties, towns, or cities comprising the State treated in this volume follows below.

**AMERICAN MEDICAL ASSOCIATION**

535 N. Dearborn Street  
Chicago, Illinois 60610

Doctor:

Please complete this questionnaire as soon as possible so that your medical record is up-to-date with correct and current information for printing of the *1973 AMA DIRECTORY*. Data obtained from this questionnaire will be aggregated and used to describe the distribution of physicians and to analyze health manpower. However, *NO information from your record will be released* to any organization for the purpose of developing independent physician data files.

Thank you.

**Instructions**

Please answer every question on the basis of your current activities.

Indicate any changes. Information which you provided previously has been printed in this form. Please complete unanswered sections and make discrete changes where applicable.

Upon completion, return the questionnaire at your earliest possible convenience, using the preaddressed envelope.

**Contents**

This questionnaire is divided into four sections:

Professional Activities—the types of activities in which each physician spends the most time during an average week.

Specialization—the time physicians spend in their major fields of specialization.

Present Employment Status—the number of hours per average week spent under various practice arrangements, by type of practice organization or employer.

Address and General Information

### III. PRESENT EMPLOYMENT STATUS

Please indicate the current number of hours spent per week for the following types of employers. (Note: employer should **NOT** be confused with the physical location of where your hours are spent.) Please answer EVERY question 1-10. If you do not spend any hours for any one of the following employers, so indicate by entering zero (0) hours.
